1 CUMULATIVE IMPACT ASSESSMENT SCREENING

1.1 Introduction

This Cumulative Impact Assessment (CIA) Screening annex sets out the approach taken for the identification of other projects with which the Oriel Wind Farm Project (hereinafter referred to as ‘the Project’) may interact to produce a cumulative impact.

Cumulative effects are defined in the EPA (2022) Guidelines on the Information to be Contained in Environmental Impact Assessment Reports as

“the addition of many minor or significant effects, including effects of other projects, to create larger, more significant effects”

This includes the impact of other relevant developments that were not present at the time of data collection or survey. This annex sets out the process followed in order to methodically and transparently screen the large number of projects that may be considered cumulatively alongside the Project. This involved a staged process that considered the level of detail publicly available for projects, as well as the potential for interactions on a conceptual, physical, and temporal basis.

Cumulative impacts are assessed in accordance with the EIA Directive. Paragraph 5(3) of Annex IV the EIA Directive requires that:

“A description of the likely significant effects on the environment of the proposed development resulting from...the cumulation of effects with other existing and/or approved projects, taking into account any existing environmental problems relating to areas of particular environmental importance likely to be affected or the use of natural resources”.

Paragraph 5 of Annex IV states:

“The description of the likely significant effects on the factors specified in Article 3(1) should cover the direct effects and any indirect, secondary, cumulative, transboundary, short-term, medium-term and long-term, permanent and temporary, positive and negative effects of the project. This description should take into account the environmental protection objectives established at Union or Member State level which are relevant to the project”.

The Project is being developed within a period of rapid growth in the offshore wind sector in Ireland. As such, the approach to CIA has, over recent years, become an issue of increasing importance for offshore wind developers. The approach to the CIA for this EIAR has considered the following guidance:

- The EPA Guidelines on the Information to be contained in Environmental Impact Assessment Reports (EPA, 2022);
- Guidance on Environmental Impact Statement (EIS) and Natura Impact Statement (NIS) Preparation for Offshore Renewable Energy Projects (Department of Communications, Climate Action and Environment, 2017);
- Guidelines for Planning Authorities and An Bord Pleanála on carrying out Environmental Impact Assessment (Department of Housing, Planning and Local Government, 2018);
- Environmental Impact Assessment of Projects – Guidance on the preparation of the Environmental Impact Assessment Report (European Commission, 2022);
- Guidelines on the Assessment of Indirect and Cumulative Impacts as well as Impact interactions (European Commission, 1999);
- Guiding Principles for Cumulative Impact Assessment in Offshore Wind Farms (RenewableUK, 2013); and

ORIEL WIND FARM PROJECT – CIA SCREENING ANNEX

- Planning Inspectorate (PINS) (2019) Advice Note 17: cumulative effects assessment relevant to nationally significant infrastructure projects.

The PINS guidance is an established methodology from the UK, utilised for a number of UK offshore wind farm projects.

1.2 Methodology

A fundamental requirement of undertaking CIA is to identify those projects or activities with which the Project may interact to produce a cumulative impact. These interactions may arise during any phase of the Project (i.e. construction, operational and maintenance and decommissioning phase). This process is referred to as 'screening'.

A staged approach as outlined in the PINS Advice Note 17 (as outlined above) has been followed in order to methodically and transparently screen the projects that may be considered cumulatively alongside the Project. This involves a stepwise process that considers the level of detail available for projects, as well as the potential for interactions on a conceptual, physical and temporal basis.

Screening was undertaken using a three-staged approach to gather information on other projects within the defined cumulative study area or Zone of Influence (Zol) for each topic considered in the EIAR.

As the Project requires both onshore and offshore infrastructure in the terrestrial and marine environments, two lists of projects were prepared to examine the potential for cumulative effects:

- The offshore list - this includes projects that had potential to impact on marine receptors. The list informed the CIA for chapters 7-17, chapter 25: Noise (airborne) and Vibration, chapter 27: Seascape, Landscape and Visual Amenity and chapter 31: Bats in the Marine Environment (volume 2B and 2C):
 - In order to undertake a comprehensive CIA, a long list of relevant projects occurring within the largest Zol (extends to approximately 509 km), which was for offshore ornithology, was produced through a desktop study (see stage 1 list in Annex 1.1). This included searching for projects along the western coasts of Scotland, England, Wales as well as the east, north and parts of the south coast of the island of Ireland. Therefore, for certain Zol's that extended outside of the ROI including offshore ornithology (chapter 11), marine mammals and megafauna (chapter 10), consideration was given to projects in other jurisdictions.
- The onshore list – this includes projects that have potential to impact on onshore receptors. The list informed the CIA for chapters 18-31 (volume 2C).
 - In order to undertake a comprehensive CIA, a long list of relevant projects occurring within a 5 km Zol from the onshore substation site and a 2 km Zol from the cable route was produced through desktop research and are listed in Annex 1.4. These incorporated the largest Zol for onshore biodiversity, population and human health, and seascape, landscape and visual amenity. It should be noted that a search for onshore wind farms within the Zone of Theoretical Visibility was also undertaken to inform the seascape, landscape and visual amenity CIA (see further details in chapter 27).

For chapter 27: Seascape, Landscape, and Visual Amenity and chapter 25: Noise (Airborne) and Vibration (chapter 25) both lists were required to assess potential for cumulative effects.

1.3 Stage 1: Compiling the long list of projects

The CIA stage 1 collates a long list of the details of projects, and includes those within both Ireland and adjoining international jurisdictions. The process for compiling the CIA long list and for screening the projects into or out of each chapter of the EIAR is described below.

Offshore EIAR Topics

Stage 1 required that the cumulative Zol was defined by each topic specialist. For each physical, biological and human environment topic of the EIAR, the cumulative Zol (see Table 1–1) was defined based upon

ORIEL WIND FARM PROJECT – CIA SCREENING ANNEX

consideration of the spatial scales of potential impact pathways and the mobility of environmental receptors, representing the likely spatial extent over which cumulative impacts may occur. The justification for defining each Zol is provided in the topic chapters of the EIAR.

Table 1–1: Cumulative Zol for offshore EIAR topics.

EIAR topic	Zol
Marine Processes (Chapter 7)	The Cumulative Marine Processes Zol is defined by the tidal excursion from the Project during springs (see volume 2B, chapter 7: Marine Processes). For the purposes of CIA Screening, any projects falling beyond a distance of 20 km from the offshore wind farm area were excluded from the long list for marine processes.
Benthic Subtidal and Intertidal Ecology (Chapter 8)	The Cumulative Benthic Subtidal and Intertidal Ecology Zol is defined by the tidal excursion from the Project during springs (see volume 2B, chapter 8: Benthic Subtidal and Intertidal Ecology). For the purposes of CIA Screening, any projects falling beyond a distance of 20 km from the offshore wind farm area were excluded from the long list for benthic subtidal and intertidal ecology.
Fish and Shellfish Ecology (Chapter 9)	The Cumulative Fish and Shellfish Ecology Zol is defined as the western portion of the Irish Sea from Ballyquintin Point (55.5 km northeast of the offshore wind farm area) to Carnsore Point (191.5 km south of the offshore wind farm area).
Marine Mammals (Chapter 10)	Marine mammals are highly mobile, and the Cumulative Marine Mammals Zol therefore focuses on defining a regional study area for impacts that may have far field effects (e.g. subsea noise from piling). For the purposes of CIA Screening, all projects within the Irish Sea were included.
Offshore Ornithology (Chapter 11)	The Cumulative Offshore Ornithology Zol was identified by consideration of the foraging ranges of seabird species recorded within the Offshore Ornithology Study Area. It extends 509.4 km around the offshore wind farm area and is based on the published mean-maximum foraging distance (plus one standard deviation (SD)) of gannet (Woodward <i>et al.</i> , 2019). The mean-maximum foraging range for gannet was chosen as a reasonable maximum extent within which cumulative effects might be likely to occur as a result of the Project and also defined the search area for Special Protection Areas (SPAs) potentially affected by the Project.
Commercial Fisheries (Chapter 12)	The Cumulative Commercial Fisheries Zol is defined by the International Council for the Exploration of the Sea (ICES) rectangles (see volume 2B, chapter 12: Commercial Fisheries). For the purposes of CIA Screening, any projects falling beyond a distance of 100 km from the offshore wind farm area were excluded from the long list for commercial fisheries.
Shipping and Navigation (Chapter 13)	The Cumulative Shipping and Navigation Zol is defined as the area within 20 nm (37 km) of the offshore wind farm area (see volume 2B, chapter 13: Shipping and Navigation). For the purposes of CIA Screening, any projects falling beyond a distance of 40 km from the offshore wind farm area were excluded from the long list for Shipping and Navigation.
Aviation, Military and Communication (Chapter 14)	Aviation impacts were scoped out of the assessment provided in chapter 14: Aviation, Military and Communication and therefore no cumulative impact assessment was undertaken for these impacts. The Communication Zol is defined as the area within 1 km of the offshore wind farm area (see volume 2B, chapter 14: Aviation, Military and Communication). For the purposes of CIA Screening, any projects falling beyond a distance of 1 km from the offshore wind farm area were excluded from the list for communications.
Marine Archaeology (Chapter 15)	The Cumulative Marine Archaeology Zol is defined as the offshore wind farm area, offshore cable corridor plus a 2 km buffer up to the Low Water Mark to further characterise its archaeological potential (see volume 2B, chapter 15: Marine Archaeology). For the purposes of CIA Screening, any projects falling beyond a distance of 1 km from the offshore wind farm area were excluded from the long list for Marine Archaeology.
Infrastructure, Marine Recreation and Other Users (Chapter 16)	The Cumulative Infrastructure, Marine Recreation and Other Users Zol is defined as the area within 25 km (see volume 2B, chapter 16: Infrastructure, Marine Recreation and Other Users). For the purposes of CIA Screening, any projects falling beyond a distance of 25 km from the offshore wind farm area were excluded from the long list for infrastructure, marine recreation and other users.
Bats in the marine Environment	The Bats in the Marine Environment Study Area was also used to inform the Zol for the CIA.

ORIEL WIND FARM PROJECT – CIA SCREENING ANNEX

EIAR topic	Zol
(Chapter 31)	

A desk study was then undertaken to search consent applications and any other available sources to identify projects falling within the largest defined Zol (ornithology) (see Figure 11-3 in chapter 11: Offshore Ornithology (volume 2B), which may have the potential to give rise to cumulative effects with the Project. For the offshore EIAR topics, these projects are predominately marine projects. This list of projects was compiled in August 2023 and included:

- Operational / active projects;
- Projects under construction;
- Approved projects but not yet implemented; and
- Submitted consent applications but not yet determined¹.

The list of projects also included the following projects which fall within the Irish Sea:

- Projects, which hold a Maritime Area Consent (MAC) under the Maritime Area Planning Act (2021) (i.e. wind farm projects designated as 'Relevant Projects' or 'Phase 1 Projects') including Arklow Bank II, Bray Bank and Kish Bank; North Irish Sea Array, Codling Wind Park (I and II). The MAC provides a right to occupy the maritime area subject to planning permission.

Proposed offshore wind farm projects that don't hold a MAC were also included in the Stage 1 offshore long list although they are not eligible to apply for planning permission without a MAC and therefore there is less certainty regarding their development. It should be noted however that many of these projects have licenses for geotechnical investigations and details on these activities have been included in the project search.

These projects were identified through a desktop study of the data sources listed in Table 1–2 below.

Table 1–2: Data sources which informed the Stage 1 screening for offshore projects and activities relative to the Project.

¹ Article 5(3) of the EIA Directive requires a description of likely significant effects from the cumulation of effects with other existing and/or approved projects. However, the approach undertaken for this CIA has also included projects that are in the consent application process to ensure any potentially future consented projects are considered.

² From 17th July 2023 foreshore applications were no longer accepted by the DHLGH. All new applications for consents in the maritime area must be submitted to the Maritime Area Regulatory Authority.

The Stage 1 offshore long list is included in Annex 1.1. Any projects that overlap with the planning application boundary for the Project are noted with a '✓' under the heading titled 'Overlap with Planning Application Boundary'.

Onshore EIAR Topics

Similar to the offshore topics, stage 1 required that the cumulative Zol was defined by each onshore topic specialist. For each physical, biological and human environment topic of the EIAR, the cumulative Zol (see Table 1–3) was defined based upon consideration of the spatial scales of potential impact pathways and the mobility of environmental receptors, representing the likely spatial extent over which cumulative impacts may occur. The justification for defining each Zol is provided in the topic chapters of the EIAR.

Table 1–3 Cumulative Zol for all onshore EIAR topics.

EIAR topics	Zol
Climate (Chapter 17)	The Climate Zol is defined by the national environment (Ireland) and identifies national offshore renewable energy projects that have potential for cumulative impacts on greenhouse gas emissions.
Population and Human Health (Chapter 18)	The Cumulative Population Zol is defined as the area within 2 km of the onshore cable route and 5 km of the proposed onshore substation site. The cumulative assessment on human health receptors is based on the assessment of the related topic assessments such as those included in chapter 28: Traffic and Transport; chapter 27: Seascape, landscape and Visual Assessment as outlined in chapter 23: Air Quality.
Onshore Biodiversity (Chapter 19)	The Cumulative Biodiversity Zol encompasses a 2 km buffer between the onshore cable route and the landfall location, south of Dunany Point, plus a 5 km buffer from the onshore substation site located in proximity to the 220kV overhead lines, east of Ardee in Co. Louth
Land and Agriculture (Chapter 20)	The Cumulative Land and Agriculture Zol is defined as those land and agricultural practices within the county of Louth that may be affected by the Project activities. It considers those lands traversed by the Project and within 100 m of the centreline of the onshore cable route.
Soils, Geology and Hydrogeology (Chapter 21)	The Cumulative Soils, Geology and Hydrogeology Zol is defined as the onshore infrastructure comprising the onshore substation site and onshore cable route (above the HWM), and a 1 km buffer from the redline boundary. For hydrogeology the boundary extends beyond this and encompasses the Louth Groundwater Body and the bedrock aquifers that underlie the Project (see volume 2C, chapter 21: Soils, Geology and Hydrogeology). All EPA licenced facilities within this wider area were also included.
Hydrology and Flood Risk (Chapter 22)	The Cumulative Hydrology and Flood Risk Zol is defined as a 250 m extension beyond the application site boundary for the onshore infrastructure above HWM. For water quality and flood risk the Slieveboy and Dee Water Framework Directive (WFD) catchments including the coastal waterbody and Louth coast were also considered (see volume 2C, chapter 22: Hydrology and Flood Risk). All EPA licenced facilities within this wider area were also included.
Air Quality (Chapter 23)	The Cumulative Air Quality Zol is defined as the area within 500 m of the proposed cable route and onshore substation site. Other sites or receptors that lie just beyond the 500 m Air Quality Study Area, such as schools, settlements and industry, have been considered and included to provide a comprehensive assessment (see volume II, chapter 23: Air Quality).
Noise (Airborne) and Vibration (Chapter 25)	The Cumulative Noise and Vibration Zol is defined as the area 300 m from the onshore cable route , 1 km from the substation boundary and within the 25 dB

ORIEL WIND FARM PROJECT – CIA SCREENING ANNEX

EIAR topics	Zol
	contour for the proposed Wind Turbine Generators (WTG) (see volume 2C, chapter 25: Noise (Airborne) and Vibration).
Cultural Heritage (Chapter 26)	The Cumulative Cultural Heritage Study Area is defined as the area within 100 m of the proposed onshore cable route and substation.
Seascape, Landscape and Visual Impact (Chapter 27)	Three cumulative Zols are considered for this topic. For the onshore substation site a 5 km buffer is utilised. For the landfall and onshore cable route a 1 km buffer from the centreline of the onshore cable route is utilised. For the offshore infrastructure a 60 km buffer from the centre of the offshore windfarm area, this being the area of sea within which the wind turbines and offshore substation (OSS) will be located (see volume 2C, chapter 27: Seascape, Landscape and Visual Amenity). For the purposes of CIA Screening, any projects falling beyond a distance of 60 km from the offshore wind farm area were excluded from the long list for SLVIA.
Traffic and Transport (Chapter 28)	The Cumulative Traffic and Transport Zol is defined as the area within 2 km of the proposed cable route and 5 km of the proposed onshore substation site. It is the road network associated with the onshore cable and onshore substation site of the Project, including the full pavement area, verge spacing, access to the dwellings and junctions. It focuses on developments that have potential to result in cumulative traffic effects on the roads that define the Traffic Study Area. Developments outside this area that would result in a significant increase in traffic volumes (e.g. large housing developments) were also considered.
Material Assets (Chapter 29)	The Cumulative Material Assets Zol is defined as the area within 300 m of the proposed planning application boundary for the onshore infrastructure (see volume 2C, chapter 29: Material Assets).
Resource and Waste Management (Chapter 30)	The Cumulative Waste Zol is defined as the area within a 300 m of the planning application boundary for the onshore infrastructure (see volume 2C, chapter 30: Resource and Waste Management).

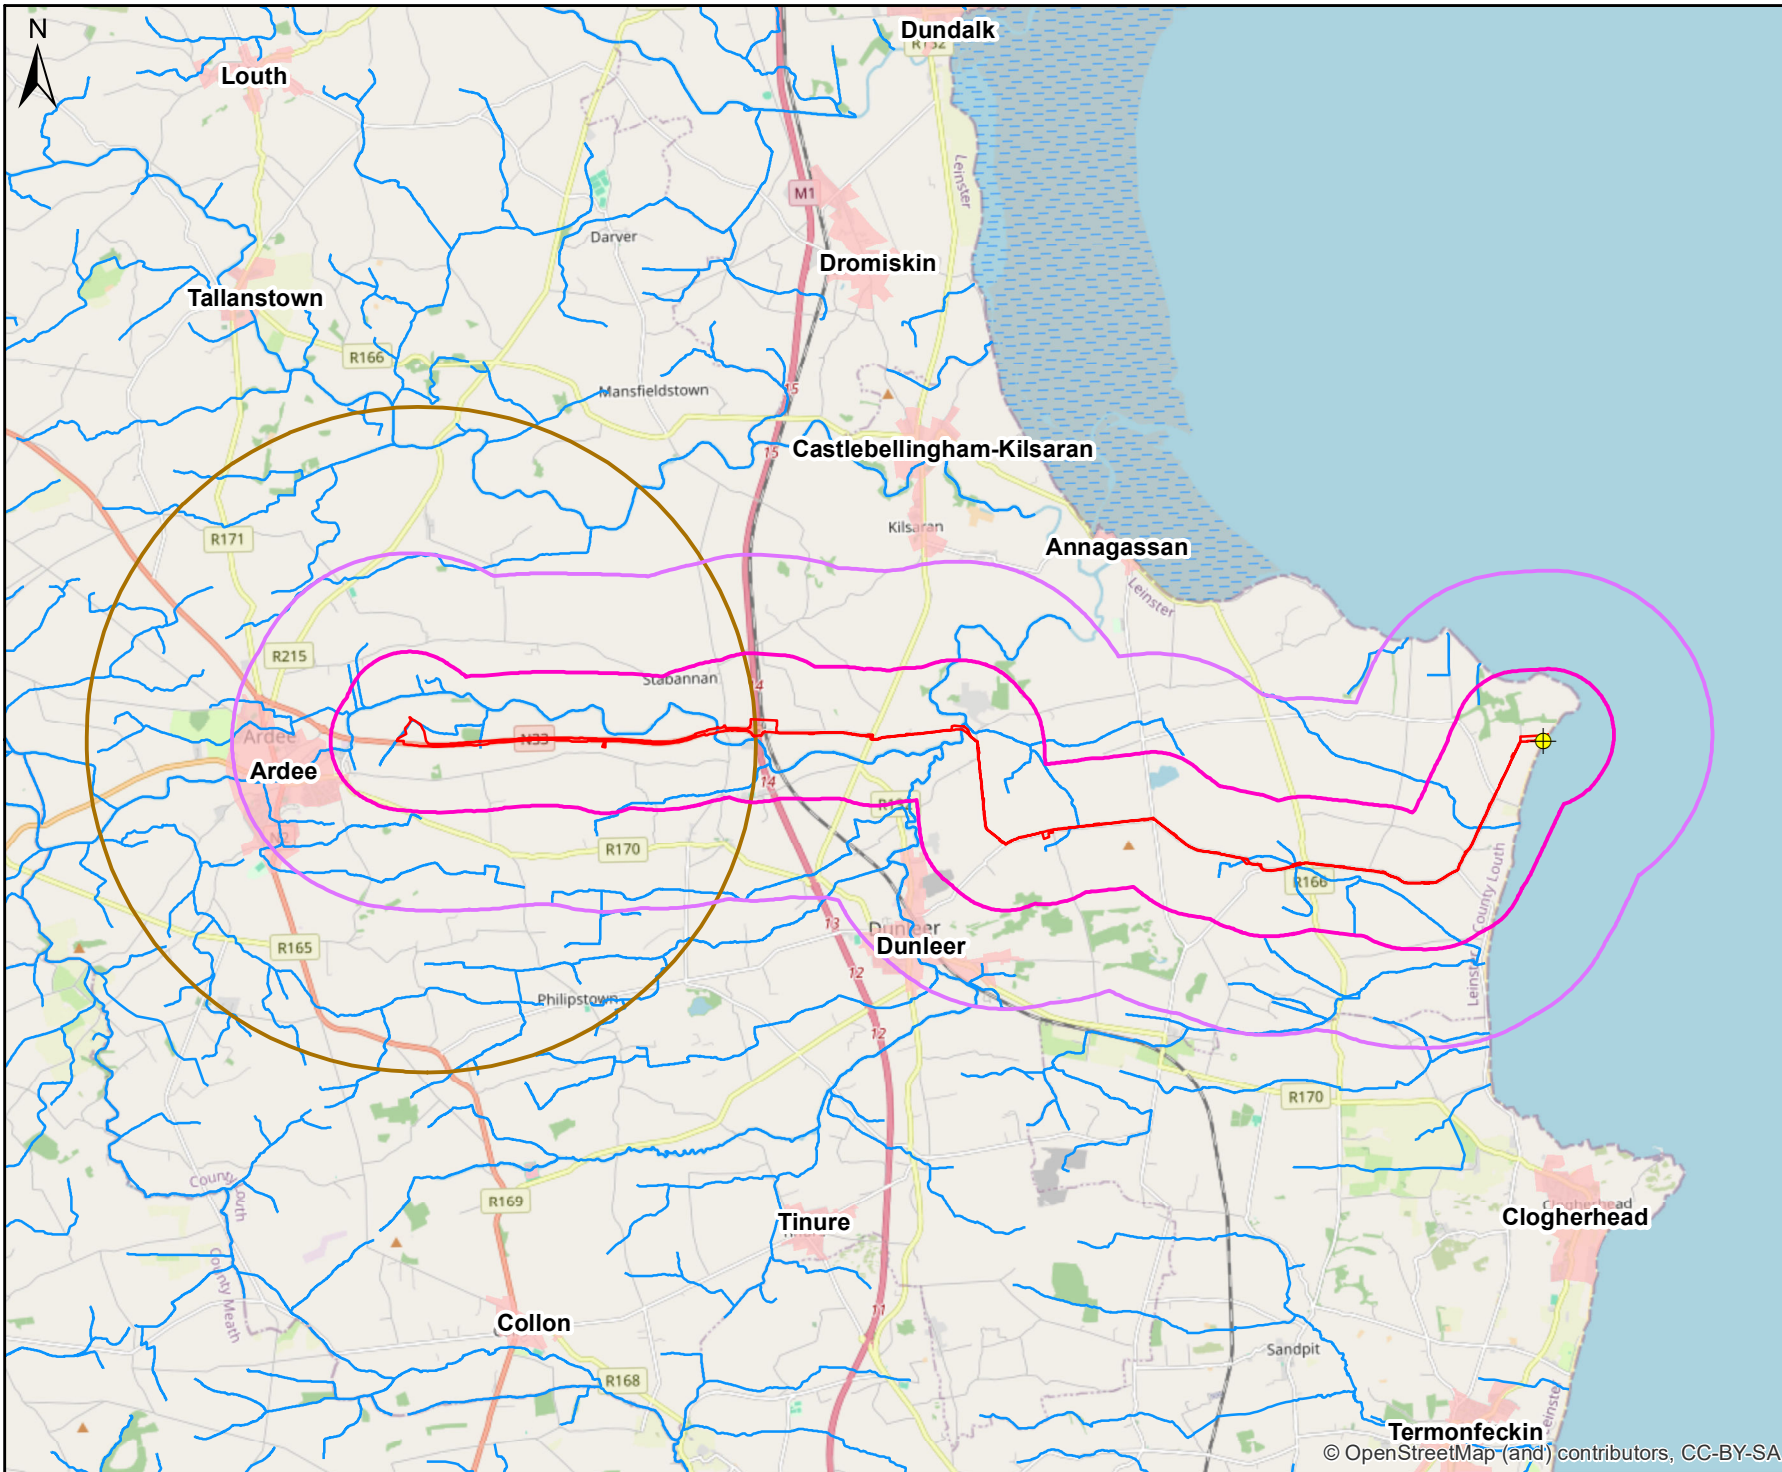

The Stage 1 onshore long list was developed based on consideration of the scale of the projects, and the potential for them to give rise to cumulative effects with the Project. For the onshore EIAR topics, these projects are predominately land based projects although some marine projects were also considered which have potential to result in cumulative effects on onshore receptors such as projects that give rise to airborne noise.

All projects were identified within the largest Zol, which was for onshore biodiversity, population and human health and seascape, landscape and visual amenity (see Table 1–3). Although for many of these topics, the assessment is focused on impacts from the onshore infrastructure on onshore receptors, some also assess impacts from the offshore infrastructure on onshore receptors such as population and human health, noise, seascape, landscape and visual assessments.

A desk study was then undertaken to search consent applications and any other available sources to identify projects and activities falling within the largest defined Zol (2 km from the onshore cable and 5 km from the onshore substation site (see), which may have the potential to give rise to cumulative effects with the Project. This list of projects was compiled in August 2023 and included:

- Operational / active projects;
- Projects under construction;
- Permitted projects but not yet implemented; and
- Submitted applications but not yet determined.

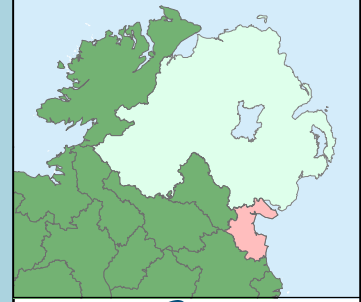

These projects were identified through a desktop study of the data sources listed in Table 1–4 below. Existing developments in the vicinity of the Project including developments under construction, which had the potential for a significant impact cumulatively with the Project were also noted during the collection of baseline data.

ORIEL WIND FARM PROJECT – CIA SCREENING ANNEX

A construction commencement date of Q3 2025 has been assumed for the construction of the onshore infrastructure over period of 27 months. Therefore any EPA licence which expires before end of 2024 was excluded on the basis of no temporal overlap with the assumed construction programme for the Project. Projects that are defined as having ‘planning’ status (i.e. a decision has not been made on the application) were assumed to have potential for temporal overlap as the construction timeline was ‘unknown’.

The following types of projects were not listed owing to their nature and scale (i.e. are unlikely to result in cumulative impacts with the Project) include: one-off housing, farm sheds/buildings, retention, house/building extensions/renovations and similar types of developments. Projects with the following application status were also not listed on the stage 1 onshore long list: incomplete, withdrawn, and refused applications.

Table 1–4 Data sources which informed the Stage 1 screening for onshore projects and activities relative to the Project.

This included projects with an above ground element that have the potential to result in cumulative seascape, landscape and visual impacts with the offshore infrastructure. This includes existing onshore wind farms and proposed onshore wind farms within the ZTV.

The Stage 1 onshore long list is included in Annex 1.4. Any projects that overlap with the planning application boundary for the Project are noted with a ‘✓’.

The definitions used to describe the status of projects in the Stage 1 offshore and onshore lists are described in Table 1-5.

ORIEL WIND FARM PROJECT – CIA SCREENING ANNEX

Table 1–5: Status description of offshore and onshore projects.

Status	Description
Open	Disposal site / area is open for commercial use
Closed / Not in use	Site/area is closed for commercial use / infrastructure no longer in use (cables, pipelines, wellhead)
Licence expired	Awarded licence for the works has expired
Unknown	No information is available.
Pre-application	Projects that are at an early / concept stage but not in a consent application process
Planning	Application is currently going through the planning process and awaiting a decision
Consented	Consent has been granted
Under construction	Project is under construction as of August 2023
Operational / active / online	Project / activity is operational as of August 2023.
Producing	Oil and Gas fields in production as of August 2023
Production ceased	Oil and Gas field production has ceased
Production suspended	Oil and Gas field production has been paused/stopped
MAC Consent	Project holds a MAC (Maritime Area Consent (ROI only) (or has made an application for a MAC consent)
Withdrawn	Project has been withdrawn from the planning application process

1.4 Stage 2: Refined lists

The Stage 2 lists include the refined list of projects following the application of the following assumptions.

Offshore list

The Stage 1 offshore long list was screened in accordance with the following key assumptions in order to provide a refined stage 2 list .

- The earliest possible construction commencement date of Q3 2025 has been assumed for the Project with construction taking place through to Q1 2028. Offshore construction is assumed to commence in Q1 2027 for 15 months. Therefore projects on the Stage 1 list with a licence/lease that expires before the end of 2026, were excluded on the basis of no temporal overlap with the Project (see columns titled ‘Temporal overlap’ on stage 1 offshore list);
- All pre application projects (early concept) were screened out due to uncertainty and the limited available information on the project (including programme) to allow a cumulative assessment to be undertaken; and
- All foreshore licence applications that were in consultation before 2018, but where no further action had since been taken to progress to application, were screened out on the basis that such projects are not likely to proceed.

The Stage 2 offshore refined list is included in Annex 1.2.

Onshore list

Further information on the projects listed in the Stage 1 onshore list was then gathered to inform the cumulative assessment for each topic chapter. This involved a desk study to source publicly available information on projects using planning databases and internet searches. The relevant project parameters for the projects considered cumulatively have been drawn from Environmental Impact Assessment Reports

ORIEL WIND FARM PROJECT – CIA SCREENING ANNEX

(EIARs) or other similarly detailed planning documents (i.e. planning applications, licence applications) or EIA Scoping Reports (although this information is limited). Approximate distances to the Project were also provided for each project to better understand the proximity and any potential for spatial overlap.

The Stage 2 onshore list is included in Annex 1.4.

1.5 Stage 3: Topic screening

Stage 3 involved tailoring the list of projects from Stage 2 to the cumulative ZoI identified for each of the offshore topics (as listed in Table 1–1) and onshore topics (as listed in Table 1–3).

Each of the topic specialists then further screened the list of projects in accordance with a set of defined screening criteria (grounds for screening in or out) in order to identify which projects should be considered in the assessment of cumulative effects (stage 3) provided in the topic chapters. The criteria are explained in **Table 1–6** below and further described in the sections below.

Table 1–6: Screening criteria for cumulative impact assessment.

Criteria	Criteria- explanation	Screening decision (in/out)
Included as part of the topic baseline	As the project has been considered as part of the relevant chapter baseline, it has already been assessed/considered and hence is not considered within the CIA.	Screened out of assessment
Part of the baseline but has an ongoing impact	As the project has been considered as part of the relevant chapter baseline, it has already been assessed. However, the project has ongoing impacts (e.g. operational effects) and is therefore considered relevant to the CIA.	Screened into assessment
Potential cumulative impact exists	An effect and pathway have been identified either within the construction, operational and maintenance and/or decommissioning phase of the project that may cause a combined impact the Project.	Screened into assessment
No conceptual or physical effect-receptor pathway	No source, pathway or effect was identified between the Project and the project.	Screened out of assessment
Low data confidence	The data provided by the project does not provide enough evidence or lacks adequate information for an assessment of cumulative effects to be completed.	Screened out of assessment
No temporal overlap	The project is defined by a different time frame and does not overlap with the time frame of the Project.	Screened out of assessment
Project has been withdrawn from development or operation	A withdrawn application is no longer relevant to be subject to assessment.	Screened out of assessment

Conceptual overlap

For a cumulative effect to occur, it must be established that a cumulative impact has the potential to directly or indirectly affect the receptor(s) in question. In EIA terms, this is described as an impact-receptor-pathway and is hereafter referred to as a conceptual overlap. An example of a conceptual overlap can be seen where increased suspended sediment concentrations arising from a nearby project and from the proposed Project (impact) affect the same population of fish and shellfish (receptor). Conversely, a conceptual overlap cannot be demonstrated between activities such as the operation of a subsea pipeline and aircraft navigation. It is in cases such as this second example where projects are screened out at this stage.

Each project on the Stage 3 list has been considered on a topic-by-topic basis in order to evaluate the potential for conceptual overlaps to exist. Projects that clearly do not have such an overlap are screened out of the assessment. In cases where a conceptual overlap is not clear-cut, the project in question has been screened into the CIA. These projects are then further considered in the relevant topic chapters.

Oriel Wind Farm Project – CIA Screening Annex

Physical overlap

The ability for impacts arising from the Project to overlap with those from other projects has been assessed on a receptor basis for each topic. This means that, in most examples, an overlap of the physical extents of the impacts arising from the two (or more) projects must be established for a cumulative impact to arise. For example, for a cumulative sedimentation impact to be established between the Project and another project, it must be established that the extent of sediment release from both projects has the potential to overlap and may affect a receptor at a single physical place. Exceptions to this exist for certain mobile receptors that may move between, and be subject to, two or more separate physical extents of impact from two or more projects. For example, marine mammals may be affected by noise impacts from the Project, as well as those from other projects where noise impact extents do not directly overlap with those from the Project. Furthermore, individual receptors from the same population may be subject to physically separate impacts occurring at the same time while the population is separated, leading to an effect upon the population as a whole. Where relevant, these potential eventualities have been noted in the relevant chapter and included in the CIA.

For the purposes of the Project CIA, all projects which do not have a physical overlap of impacts for a given EIA topic with those of the Project have been screened out. This approach is consistent with Guiding Principle 5 of the RenewableUK Cumulative Impact Assessment Guidelines (RenewableUK, 2013).

Temporal overlap

In order for a cumulative effect to arise from two or more projects, a temporal overlap of impacts arising from each must be established. Some impacts are active only during certain phases of development, such as piling noise during construction. Such a consideration is particularly important for receptors such as marine mammals, where the overlap of impacts during construction, such as noise from the piling activities of several large offshore developments, may be important. The anticipated construction phases for projects within the CIA Stage 3 lists have been obtained from their relevant planning documents (e.g. EIAR, environmental reports, etc.) or where details are unknown, it has been assumed that there is potential for overlap with the Project. The details provided represent the current understanding of programmes of development though it is recognised that these programmes may be subject to change.

For the purposes of the Project CIA, all projects that were built and operational at the time of the Project data collection (field surveys etc.) have been screened out of the relevant topic CIA. This is because the effects of these projects have already been captured within the Project site-specific surveys, and hence their effects have already been accounted for within the baseline assessment. The exclusion of built and operational projects that were in place at the time of data collection/survey in this way avoids the double-counting that would occur if projects were to be included within both the baseline and the CIA. The exception to this is where projects have an ongoing impact, and this is addressed by the screening criterion 'part of the baseline but has an ongoing impact'.

However, it should be noted that projects are not always screened out automatically based on there being no direct temporal overlap (e.g. activities resulting in disturbance from other projects occurring immediately prior to the Project) due to the potential for some receptors to be cumulatively affected by repeat impacts across consecutive years.

The tiered approach

CIA are carried out using a tiered approach. This approach provides a framework for placing relative weight on the potential for each project to be included in the CIA to ultimately be realised, based upon the project's current stage of maturity and certainty in the project's parameters. The allocation of each project into tiers is not affected by the screening process but is merely a categorisation applied to all projects that have been screened in for assessment.

The tiered approach is consistent with the Renewable UK Cumulative Impact Assessment Guidelines, specifically Guiding Principle 4 and Guiding Principle 7 (RenewableUK, 2013) and the Planning Inspectorate Advice Note Seventeen (Planning Inspectorate, 2019). It recommends that '*a level of certainty, reflecting the availability of detail and information necessary for the assessment, is assigned to each development and recorded*' (Planning Inspectorate, 2019).

ORIEL WIND FARM PROJECT – CIA SCREENING ANNEX

Projects that fall into tier 3 will likely have very little information available in the public domain. What data is in the public domain must be carefully considered by authors to determine if this is sufficient to undertake an assessment. Projects should only be taken forward to assessment where there is enough data to do so. This may differ between topics, for some topics the data available may be sufficient, for others it may be screened out due to low data availability. No assumptions can be made on behalf of the projects. A combined cumulative impact assessment of Tiers 1 and Tier 2 (and tier 3 if sufficient information is available) with the Project is provided for screened in projects in the topic assessment chapters.

Table 1–7: Tiering regarding certainty of development used in the CIA for the Project.

Tier	Certainty of development
1	Projects under construction/underway. Project application consented, but not yet implemented. Project application submitted (but not yet determined).
2	Project with a MAC consent granted.
3	Project that are proposed but not in the consent application process (e.g. future potential renewable energy projects). Projects that may be developed in future, but for which no specific information is currently available. Projects that have been identified in plans but are not in the consent application process.

Data confidence

Data confidence is taken into account when screening projects into or out of the CIA. The premise here is that projects with a low level of detail publicly available cannot meaningfully contribute to a CIA and, as such, are screened out. The application of this screening step is consistent with Guiding Principle 7 of the RenewableUK Cumulative Impact Assessment Guidelines (RenewableUK, 2013).

Decisions upon whether to screen a project in or out at this stage are taken on a topic-by-topic basis. This allows certain projects to be screened in for certain topics where sufficient detail is present, while the same project may be screened out for another topic.

In order to categorise data confidence for the purposes of this EIAR, a three-point scale has been employed (Table 1–8). This scale aims to provide a transparent basis upon which projects may be screened in or out at this step.

For the purposes of screening, projects with high or medium data confidence have been automatically screened into the CIA. Projects with low data confidence have been screened out of the assessment. This category includes projects that the Project team is aware may take place in the future, but have no information on how the plan or project will be executed and therefore cannot be considered within the CIA.

Table 1–8: Criteria for the allocation of data confidence.

Data confidence	Criteria
High	<ul style="list-style-type: none"> Projects with an EIAR or other equivalently detailed planning document, containing sufficient topic-specific detail for an adequately detailed CIA to be undertaken on a quantitative or semi-quantitative manner; and Project parameters for other projects confirmed as being accurate by the Developer.
Medium	<ul style="list-style-type: none"> Projects where data has been obtained from the public domain or the Project's website containing a moderate level of detail that still allows a CIA to be undertaken on a qualitative basis.
Low	<ul style="list-style-type: none"> Projects with a lack of robust information and where details of implementation are scarce or likely to change before any potential consent/approval.

The Stage 3 offshore lists are included in Annex 1.3. There is no stage 3 list for marine archaeology as no projects fall within the Zol for marine archaeology.

ORIEL WIND FARM PROJECT – CIA SCREENING ANNEX

The Stage 3 onshore are included in Annex 1.6.

1.6 Implementing the CIA for the Project

Following the specialists review of all projects on the Stage 3 lists, those projects that screened into the CIA were brought forward for assessment in the relevant topic chapters of the EIAR. The CIA is presented within each topic chapter (chapters 7 to 31) in a separate section (titled 'Cumulative Impact Assessment'). The projects that screened in are listed in a table and indicated on a map included in this section. The potential impacts that may result in cumulative effects are listed prior to the presentation of the cumulative impact assessment.

All topics have, in the first instance, aimed to undertake a full quantitative assessment, however in select cases the assessment presented employs a mix of qualitative and quantitative, or wholly qualitative assessment (depending on the information available).

1.7 Cumulative impacts screening matrix

The CIA lists for the Project are presented in annex 1.1 to 1.6. This includes the Stage 1 long list, the Stage 2 refined list, and the Stage 3 topic screening lists. The Stage 3 Screening Criteria is presented in Table 1-9.

Table 1–9: Screening criteria.

	Included as part of the topic baseline and hence not considered within the cumulative impact assessment and screened out of the assessment.
	Part of the baseline but has an ongoing impact and is therefore considered relevant to the cumulative impact assessment: Screened in for assessment.
	Potential cumulative impact exists: Screened in for assessment.
	No conceptual or physical effect-receptor pathway: Screened out of assessment.
	Low data confidence: Screened out of assessment.
	No temporal overlap: Screened out of assessment.
	Project has been withdrawn from development or operation

1.8 Engagement with Phase 1 Project developers

To inform the CIA, the Applicant has engaged with the other Phase 1 developers on the east coast of Ireland as these projects fall within the Zol for the following offshore topic assessments:

- Chapter 9: Fish and Shellfish Ecology;
- Chapter 10: Marine Mammals and Megafauna;
- Chapter 11: Offshore Ornithology;
- Chapter 13: Shipping and Navigation;
- Chapter 27: Seascape, Landscape and Visual Assessment; and
- Chapter 32: Bats in the Marine Environment.

ORIEL WIND FARM PROJECT – CIA SCREENING ANNEX

These Phase 1 projects are expected to lodge an application for consent before end of June 2024. Therefore, should the Project receive consent, there is the potential for all phases of the Project to occur at the same time as the other consented Phase 1 projects.

Engagement with the other Phase 1 developers commenced in August 2022. This involved regular discussions and workshops between the project teams including the relevant specialists involved in the assessments of the above topics. Project information was shared amongst teams and this was used to inform the assessments. Engagement continued into early 2024 and the teams will continue to engage as the application processes progress.

As a result of engagement, further information on the following has been used to inform the above topic CIA:

- Approach and methodology used to identify other projects for CIA (i.e. discussion on the Zol used and the reasoning for screening in/out projects);
- Approach and methodologies used to inform the above topic assessments including alignment on sensitivities and magnitudes where possible;
- Seascape, landscape and visual assessment: Sharing of project parameters to allow preparation of cumulative wirelines and photomontages for projects that exist within each other Project's ZTV; and
- Ornithology: Sharing of data and outputs from collisions risk modelling, displacement and Population Viability Analysis (PVA) to inform the assessment of potential cumulative impacts on offshore ornithology.

It should be noted that approaches to assessments across projects may vary, however, overall the collaboration on the above has provided more robust inputs and understanding of the nature and type of potential cumulative impacts.

It should also be noted that where information was not available or provided through the above engagement, a number of assumptions have been used to inform the CIA. For example, where construction or operation programmes are not known, it is assumed that there is potential for projects to overlap.

Further details on the above are provided in the individual topic chapters in volume 2B and 2C.

1.3 Annex 1.3 - CIA Stage 3 offshore topic lists

Location	Type	Reference	Developer	Project Title	Distance from Oriel Planning Application Boundary (km)	Spatial/ temporal overlap with Oriel			Status of Project	Licensable Period		Public domain link	Screening outcome	Justification
						Overlap with Planning Application Boundary	Temporal overlap with construction (Q3 2025 - 2027)	Temporal overlap with operation (2028 - 2068)		Start date	License Expiration Date			
Navigational Dredge														
Ireland	Dredging	FS007223	Sean O'Hanlon (O'Hanlon and Sons Ltd)	Dundalk Port Maintenance Dredging	17	*	✓	✓	Consented	01/10/2022	01/10/2032	https://www.gov.ie/en/foreshore-notice/6387a- Dundalk-port-maintenance-dredging/		Screened out given that the spatial extent of suspended sediment plumes from this project would not exceed 3 km from the site and not extend to the mouth of Carlingford Lough which is the maximum extent of plumes arising from the construction phase of the Oriel Wind Farm Project. Furthermore, sediment recovered during the construction and maintenance phase of the works are being recovered and brought across, therefore further decreasing the potential for a Cumulative Impact.
Ireland	Dredging	S0015-03	Drogheda Port Company	Release of the material through the hull of the vessel while the vessel is in motion	16.00	*	✓	✓	Consented	2021	12/02/2029	https://epawebapp.epa.ie/terminalfour/DaS/DaS-view.jsp?regno=S0015-03		Screened out given that there is no pathway of interaction with tidal excursion
Water Pipelines & Water Treatment (Ireland)														
Ireland	Water Pipeline Projects	FS006575	Irish Water	-	20	*	✓	✓	Consented	Oct-20	Oct 2055	https://www.gov.ie/en/foreshore-notice/6cc91-irish-water-meath-sewerage-scheme/		Screened out given that the terrestrial works would be undertaken at low tide and therefore preclude a pathway for interaction
Energy Projects														
Ireland	ORE Projects	-	Statkraft	North Irish Sea Array	16	*	✓	✓	MAC Consent	N/A	N/A	https://northirishsearray.ie/		Screened in due to potential for construction and operational phase to coincide with the construction and/or operational and maintenance phases of the Project. Potential cumulative impact to sediment concentration/transport and sediment concentration/transport pathways.
Coastal Projects														
Ireland	Port/Marine Infrastructure	306177	-	-	20	*	Unknown	Unknown	Consented	Unknown	Unknown	https://www.pleanala.ie/en-je/case/306177		Screened out given the construction of these terrestrial works would be undertaken at low tide. A cumulative impact with this project can be screened out given the lack of pathway for interaction
Ireland	Port/Marine Infrastructure	FS006748	Greenore Port - Louth	-	> 10	*	✓	✓	Consented	2021	In perpetuity	gov.ie - FS006748 Greenore Port - Louth (www.gov.ie)		Screened out as included in baseline
Site Investigations for Renewables (Ireland)														
Ireland	ORE Site Investigations	FS007392	Lir Offshore Array Ltd.	Lir Offshore Array Ltd., Site Investigations for the proposed Lir Offshore Array	8	*	✓	✓	Planning	Unknown	Unknown	https://www.gov.ie/en/foreshore-notice/987eb-fs007392-lir-offshore-array-ltd-site-investigations-for-the-proposed-lir-offshore-array-off-counties-louth-meath-and-dublin/		No pathway present
Ireland	ORE Site Investigations	FS007373	Mainstream Renewable Power Ltd	Mainstream Renewable Power Ltd - Site Investigations off Co. Dublin	4	*	✓	✓	Planning	N/A	N/A	https://www.gov.ie/en/foreshore-notice/cd097-mainstream-renewable-power-ltd-site-investigations-off-co-dublin/		No pathway present
Other Works (Ireland)														
Ireland	Sampling	FS007197	Dr Grace Cott and Shannon Burke	UCD Soil and Vegetation Sampling - Dundalk Marshes	> 20	*	✓	✓	Planning	Unknown	Unknown	https://www.gov.ie/en/foreshore-notice/abf6f-ucd-soil-and-vegetation-sampling-dundalk-marshes/		No pathway present

						Overlap with Planning Application Boundary	Temporal overlap with construction (Q3 2025 - 2027)	Temporal overlap with operation (2028 - 2068)		Start date	License Expiration Date			
Navigational Dredge														
Ireland	Dredging	FS007223	Sean O'Hanlon (O'Hanlon and Sons Ltd)	Dundalk Port Maintenance Dredging	17	x	✓	✓	Consented	01/10/2022	01/10/2032	https://www.gov.ie/en/foreshore-notice/6387a-dundalk-port-maintenance-dredging/		This project is a considerable distance away from the Project offshore wind farm area and offshore cable corridor. The impact of this project on benthic subtidal and intertidal receptors will be extremely limited in extent, as outlined in the planning application for this project. In addition, given this is located in a coastal/estuarine area, within this would affect very different benthic receptors (i.e. species, communities and habitats) to the offshore receptors predicted to be affected by the Oriel Project.
Ireland	Dredging	S0015-03	Drogheda Port Company	Release of the material through the hull of the vessel while the vessel is in motion	16	x	✓	✓	Consented	2021	12/02/2029	https://epawebapp.epa.ie/terminalfour/DaS/DaS-view.jsp?regno=S0015-03		This project is a considerable distance away from the Project offshore wind farm area and offshore cable corridor. The impact of this project on benthic subtidal and intertidal receptors will be extremely limited in extent, as outlined in the planning application for this project.
Water Pipelines & Water Treatment (Ireland)														
Ireland	Water Pipeline Projects	FS006575	Irish Water	-	20	x	✓	✓	Consented	Oct-20	Oct 2055	https://www.gov.ie/en/foreshore-notice/6ec91-irish-water-oneath-sewerage-scheme/		This project is a considerable distance away from the Project offshore area and offshore cable corridor. The impact of this project on benthic subtidal and intertidal receptors will be extremely limited in extent, as outlined in the EIA for this project. In addition, given this is located in a very coastal area, within Carlingford Lough this would affect very different benthic receptors (i.e. species, communities and habitats) to the offshore receptors predicted to be affected by the Oriel Project.
Energy Projects														
Ireland	ORE Projects	-	Statkraft	North Irish Sea Array	16	x	✓	✓	MAC Consent	N/A	N/A	https://northernirishsearray.ie/		Potential for construction and operation phases to overlap with the Project. Potential for overlap for impacts such as SSC, habitat loss (temporary and long term) and colonisation of hard substrates.
Coastal Projects														
Ireland	Port/Marine Infrastructure	306177	-	-	20	x	Unknown	Unknown	Consented	Unknown	Unknown	https://www.pleanala.ie/en-ie/case/306177		This project is a considerable distance away from the Project offshore wind farm area and offshore cable corridor. The impact of this project on benthic subtidal and intertidal receptors will be extremely limited in extent, as outlined in the planning application for this project. In addition, given this is located in a coastal area, within Dundalk Bay this would affect very different benthic receptors (i.e. species, communities and habitats) to the offshore receptors predicted to be affected by the Oriel Project.
N. Ireland	Port/Marine Infrastructure	ML2023023	Louth County Council	Carlingford Lough Greenway Section 3 (between NI/ROI border and Victoria Lock)	> 20	x	✓	✓	Planning	Unknown	Unknown	https://www.daera-ni.gov.uk/consultations/carlingford-greenway-section-iii-mi2023023		This project is a considerable distance away from the Project offshore wind farm area and offshore cable corridor. The impact of this project on benthic subtidal and intertidal receptors will be extremely limited in extent, as outlined in the planning application for this project. In addition, given this is located in a coastal area, within Dundalk Bay this would affect very different benthic receptors (i.e. species, communities and habitats) to the offshore receptors predicted to be affected by the Oriel Project.

						Overlap with Planning Application Boundary	Temporal overlap with construction (Q3 2025 - 2027)	Temporal overlap with operation (2028 - 2068)		Start date	License Expiration Date			
Navigational Dredge														
Ireland	Dredging	FS007223	Sean O'Hanlon (O'Hanlon and Sons Ltd)	Dundalk Port Maintenance Dredging	17	x	✓	✓	Consented	01/10/2022	01/10/2032	https://www.gov.ie/en/foreshore-notice/6387a- Dundalk-port-maintenance-dredging/		The dredging will be located in the navigational channel with material being transferred ashore at Dundalk. This means that there will be no interaction between vessels associated with the project and the dredging operation. The distance from the project also means that any effect the project has on other vessels navigating in the area will not be influenced by the dredging activity. Dredging activity is also a time limited operation with one vessel meaning that any cumulative effects are considered to be negligible.
Ireland	Dredging	S0015-03	Drogheda Port Company	Release of the material through the hull of the vessel while the vessel is in motion	16	x	✓	✓	Consented	2021	12/02/2029	https://epawebapp.epa.ie/terminal/four/DaS/DaS-view.jsp?regno=S0015-03		This is the same operation as below
Ireland	Dredging	FS007028	Drogheda Port Company	Drogheda Port Company Dredging of River Boyne	25	x	✓	✓	Consented	01/11/2021	01/11/2029	https://www.gov.ie/en/foreshore-notice/38923-drogheda-port-company-dredging-of-river-boyne/		Drogheda port and the proposed disposal sites are located at a distance from the Oriel Windfarm area that there will be no spatial overlap with operations for construction, operation or decommissioning of the Oriel Windfarm. The distance also means that any effect by either the Project or the dredging activity would not contribute to each other. Dredging activity is also a time limited operation with one vessel meaning that any cumulative effects are considered to be negligible.
Coastal Projects														
Ireland	Port/Marine Infrastructure	FS006984	Rush Sailing Club	Rush Sailing Club Landing Pontoon	> 39	x	✓	✓	Planning	N/A	N/A	https://www.gov.ie/en/foreshore-notice/7bc5d-fs006984-rush-sailing-club-landing-pontoon/		The pontoon is located within Rogerstown Estuary approx. 25 nm south of the Project. The pontoon was installed in April 2021 and will result in a negligible change in the recreational activity in the area. The extent of this activity is very unlikely to overlap spatially with the Project.
Ireland	Port/Marine Infrastructure	306177	-	-	20	x	Unknown	Unknown	Consented	Unknown	Unknown	https://www.pleanala.ie/en-ie/case/306177		There is no maritime based element to this project meaning that there is no pathway for shipping and navigation.
Ireland	Port/Marine Infrastructure	FS006748	Greenore Port - Louth	-	> 10	x	✓	✓	Consented	2021	In perpetuity	gov.ie - FS006748 Greenore Port - Louth (www.gov.ie)		Screened out as included in baseline

Louth	Water Treatment	22960	Louth County Council	1	1	x	✓	✓	Consented	12/12/2022	http://www.eplanning.ie/LouthCC/APPFileRefDetails/22960/0	Permission for a new proprietary waste water treatment system, percolation area, connection to public water mains and all associated and ancillary site works "Further information received 20/02/2023"		The project will result in negligible effects on population and therefore has been screened due to minimal potential for cumulative effects to arise with the Project.
Meath	Utilities	2360296	Meath County Council	0	0	✓	✓	✓	Planning	04/01/2024	ePlan - Online Planning Details	Permission for works associated with the proposed upgrade of the existing Louth – Woodland 220 kV overhead powerline (OHL) between the existing Louth 220 kV substation in the townland of Monavallet, County Louth and the existing Woodland 220 kV substation in the townland of Woodland, County Meath. The Louth – Woodland 220 kV OHL is approximately 61.5 km long and comprises 207 no. steel lattice tower structures		The EirGrid project requires works at the onshore substation site, however such works won't take place during the construction phase of the Project. There is potential for foundation strengthening and other works along the line to the north and south of the proposed substation site to overlap with the construction of the Project. (The EirGrid project does not propose any temporary construction compounds near the Project). However, such works are limited in nature, extent and duration and are not anticipated to result in cumulative effects on Population with the construction of the onshore substation (should they overlap). In any case, the Applicant will liaise with EirGrid on the programme of works. There is no potential for cumulative effects during the operational and maintenance phase.

The proposed construction works within the 1 km buffer of the Project are limited, therefore, there are no significant impacts likely to soil and/or groundwater.
Louth	Residential/Amenity	19247	Louth County Council	0.8	1.1	*	✓	✓	Consented	04/04/2019	http://www.eplaning.ie/Louth/HCC/AppFileRefDetails/19247/0	Permission for (a) change of use from industrial to education of existing unit, (b) alterations as required to elevations, (c) provision of building signage (d) and all ancillary site works.		Elements of the proposed development are within 1 km of the Project (Study Area). As the proposed works are for a change of use, no significant construction impacts are expected. Therefore, there are no significant impacts likely to soil and/or groundwater.
Louth	Commercial	20341	Louth County Council	0.7	7.9	*	✓	✓	Consented	14/05/2020	http://www.eplaning.ie/Louth/HCC/AppFileRefDetails/20341/0	Permission for 1. Change of use for existing warehouses nos. 1, 2, 3, 8, 9, 10, 11, 12, 13, 14 and 15 from commercial agricultural warehouses to Bonded Whiskey Maturation Warehouses including all necessary upgrade works and all associated site works. 2.		Elements of the proposed development are within 1 km of the Project (Study Area). As the proposed works are for a change of use, no significant construction impacts are expected. Therefore, there are no significant impacts likely to soil and/or groundwater.
Louth	Industrial	21221	Louth County Council	0.5	8.0	*	✓	✓	Consented	05/03/2021	http://www.eplaning.ie/Louth/HCC/AppFileRefDetails/21221/0	Permission for 1. Change of use for existing warehouses nos 4, 4A, 5, 6, 7, 7A, 18, 17, 18, 19, 20, 21 and 22 from commercial agricultural warehouses to Bonded Whiskey Maturation Warehouses. 2. Revisions to elevations and roof profile of units 4, 4A, 5.		Elements of the proposed development are within 1 km of the Project (Study Area). As the proposed works are for a change of use, no significant construction impacts are expected. Therefore, there are no significant impacts likely to soil and/or groundwater.
Louth	Agriculture	2227	Louth County Council	0	9	*	✓	✓	Consented	18/01/2022	http://www.eplaning.ie/Louth/HCC/AppFileRefDetails/2227/0	Permission for the construction of a road underpass for the movement of dairy cattle and ancillary works (i.e. drainage tanks and drainage, approach roads each side of underpass and minor revisions to roadside boundaries all for agricultural purposes onl		Elements of the proposed development are within 1 km of the Project (Study Area). The proposed construction works within the 1 km buffer of the Project are limited, therefore, there are no significant impacts likely to soil and/or groundwater.
Louth	Industrial	22780	Louth County Council	0	5	*	✓	✓	Consented	04/10/2022	http://www.eplaning.ie/Louth/HCC/AppFileRefDetails/22780/0	Permission for a warehouse facility consisting of 2 no. maturation warehouses, ancillary buildings and structures, landscaping, surface water retention pond, fire retention pond, waste water treatment system, boundary treatment and fencing and associated		Elements of the proposed development are within 1 km of the Project (Study Area). The proposed construction works within the 1 km buffer of the Project are limited, therefore, there are no significant impacts likely to soil and/or groundwater.
Louth	Water Treatment	22960	Louth County Council	1	1	*	✓	✓	Consented	12/12/2022	http://www.eplaning.ie/Louth/HCC/AppFileRefDetails/22960/0	Permission for a new proprietary waste water treatment system, percolation area, connection to public water mains and all associated and ancillary site works "Further information received 20/02/2023"		The proposed development is within the 1 km Project Study Area. The Project will not have any discharge during the operational phase, therefore, a potential for cumulative impacts is only assessed if the construction phase of the Project coincides with the construction and/or operational phase of the proposed development. The volumes of effluent from these treatment works and from the Project (only during construction) are not considered significant, therefore, the impacts are not considered to have a likely significant in-combination effect on Soils, Geology and Hydrogeology.

Meath	Utilities	Z360296	Meath County Council	0	0	✓	✓	✓	Planning	04/01/2024	ePlan - Online Planning Details	Permission for works associated with the proposed upgrade of the existing Louth – Woodland 220 kV overhead powerline (OHL) between the existing Louth 220 kV substation in the townland of Monavallet, County Louth and the existing Woodland 220 kV substation in the townland of Woodland, County Meath. The Louth – Woodland 220 kV OHL is approximately 61.5 km long and comprises 207 no. steel lattice tower structures		The EirGrid project requires works at the onshore substation site, however such works won't take place during the construction phase of the Project. There is potential for foundation strengthening and other works along the line to the north and south of the proposed substation site to overlap with the construction of the Project. (The EirGrid project does not propose any temporary construction compounds near the Project). However, such works are limited in nature, extent and duration and are not anticipated to result in cumulative effects on soils and geology with the construction of the onshore substation (should they overlap). In any case, the Applicant will liaise with EirGrid on the programme of works. There is no potential for cumulative effects during the operational and maintenance phase.

Louth	Communications	21417	Louth County Council	0	14	*	✓	✓	Consented	16/04/2021	http://www.eplanning.ie/LouthCC/AppFileRefDetails/21417/0	Permission for construction of an 18 metre high free standing communications structure with its associated antennae, communication dishes, ground equipment and all associated site development works. The development will form part of Eircom Ltd. existing		Given the nature of the cable works, which will run underground along the existing road, it is not considered that there will be a cumulative impact on the cultural heritage environment at this location.
Meath	Utilities	2360296	Meath County Council	0	0	✓	✓	✓	Planning	04/01/2024	ePlan - Online Planning Details	Permission for works associated with the proposed upgrade of the existing Louth – Woodland 220 kV overhead powerline (OHL) between the existing Louth 220 kV substation in the townland of Monavallet, County Louth and the existing Woodland 220 kV substation in the townland of Woodland, County Meath. The Louth – Woodland 220 kV OHL is approximately 61.5 km long and comprises 207 no. steel lattice tower structures		The EirGrid project requires works at the onshore substation site, however such works won't take place during the construction phase of the Project. There is potential for foundation strengthening and other works along the line to the north and south of the proposed substation site to overlap with the construction of the Project. (The EirGrid project does not propose any temporary construction compounds near the Project). However, such works are limited in nature, extent and duration and are not anticipated to result in cumulative effects on Cultural Heritage with the construction of the onshore substation (should they overlap). In any case, the Applicant will liaise with EirGrid on the programme of works. There is no potential for cumulative effects during the operational and maintenance phase.
